3rd February 2020

Dear Valued Customer,

REF: Discontinuation of Gammachrome YR

Harwell Dosimeters last manufactured this product in 2014 and we continue to see a reduction in demand for this specialised product as Customers use other Dosimetry systems including Alanine Tape Tab.

The shelf life of this last batch expired in Dec 2019 and based on the demand We have decided to discontinue the manufacture and sale of the Perspex Gammachrome YR (0.1 kGy to 3.0 kGy) dosimeter.

We appreciate and value your partnership. While we regret any inconvenience this announcement may cause, we are pleased to announce we have an alternate product that covers this dose range.

We recommend Alanine Tape Tab (0.1 kGy to 100 kGy) dosimeters, as a technically superior and more flexible alternative. We now have a collaboration with Aerial that offers Electron Spin Resonance spectrometer readers (ESR), as well as the associated software and technical support for industrial users of Alanine dosimetry.

Please contact us if you have additional questions or would be interested in taking any of the remaining stock we have. We are also happy to discuss the Alanine tape tab solution if this is something you would be interested in.

Kind Regards

David Pymer

General Manager Harwell Dosimeters Limited
